## Narrative

Narrative: C: R20 dispatched to OB

H: Upon arrival pt. mother found on all fours, AOX4, GCS 15, with midwife on-scene stating full-term pregnancy with confirmed delivery, and that she has visualization of baby's foot at this time. Midwife and pt. Mother deny any other medical injuries or complaints and state no known complications.

A: Upon pt. assessment midwife advises EMS that she now sees two feet and has confirmed fetal heart tones via ultrasound. Decision made to continue delivery at birthing center. Labor progresses however baby to become stuck upon delivery of head. Prolonged labor continued with multiple birthing positions attempted without success. Decision for rapid transport made at this time. En route umbilical pulses noted to be present at this time, midwife advises she is unable to palpate baby's mouth due to positioning of baby. EMS attempts to palpate baby's mouth and is unable to due to positioning of baby. EMS notes loss of umbilical pulses at this time. Placenta noted to be positioned near baby's head and placenta appearing to be unattached. Umbilical cord cut at this time.

R: Chest compressions and IO access initiated at this time. Epinephrine administered while chest compressions continued. Baby's head remains stuck in birth canal of mother and unable to dislodge.

T: SMH notified via med channel C-7. Pt. care and vitals monitored en route. Pt. care and report transferred to SMH ER Physician. R20 available.
